FUTURE-STATE JOURNEY · 4 STAGES

Diego's Future State: Delivered in One Tap

Reclaim operational simplicity. Surface only the tools frontline drivers need, and make the app the fastest way to get the job done.

PERSONA

Diego, Frontline Delivery Driver

Three years on the road (UXR-01)

GOAL

Complete every stop quickly and reliably, and let dispatch know it's done, so he finishes his shift on time without workarounds.

TODAY'S MOMENT OF MISERY

In the rain, at a doorstep, with a package in one hand, he taps through three screens to mark a stop delivered, so he texts his dispatcher instead.

1

Start Route

USER ACTION

Opens app → Start Route sits front and center, no menu hunting.

Sees only today's stops → no legacy features competing for attention.

INTERNAL STATE

Ready and confident; the app feels like a tool, not a maze.

PAIN POINT ADDRESSED

Core actions buried 2–3 levels deep under unused features (BUG-2079, UXR-11).

2

Arrive at Stop

USER ACTION

Pulls up → current stop details appear first, nothing else on screen.

Hands over package → both hands stay on the job, not the phone.

INTERNAL STATE

Focused on the customer and the weather, not the screen.

PAIN POINT ADDRESSED

Feature clutter hides what drivers need when they need it (UXR-04, UXR-11).

3

Mark Delivered

USER ACTION

Taps one large Delivered button → stop closed in seconds, one-handed, even in rain.

Sees instant confirmation → no doubt it worked, no extra taps or retakes.

INTERNAL STATE

Relief: the app finally keeps pace with the job.

PAIN POINT ADDRESSED

Three taps across three screens to mark delivered (BUG-2055, UXR-01).

4

Dispatch Informed

USER ACTION

Moves on → completion reaches dispatch automatically, no text message needed.

Next stop loads at once → momentum holds through the whole shift.

INTERNAL STATE

In control; trusts the app as the single source of truth.

PAIN POINT ADDRESSED

Drivers text dispatch instead of using the app (UXR-01, UXR-02).

3 COMPETITIVE ADVANTAGES OVER THE MANUAL WORKAROUND

1. **Structured, timestamped completion** → dispatch board stays accurate without manual reconciliation.
2. **One tap in the app** → faster and safer than typing a message one-handed in the rain.
3. **Every completion recorded in-platform** → adoption becomes measurable and admin reporting stays trustworthy.
